Write your review.

Comment on the following problem:

Elderly people who live alone should be taken care of.

Write 100–120 words.

Elderly people often cannot take care of themselves and need help of their relatives. Elderly people who live alone need to be taken care of either. But they haven't got relatives near enough who can come quickly and help. Therefore the new sound monitoring system was invented that can examine noises in homes via a microphone connected to a data centre. The technology is refined enough to differentiate between the sound of a falling object or a collapsing human and can instantly alert members of security firms if any abnormality is detected.

So, you see, the elderly people who live alone would be in no danger.
